SUMMARY

Backend Engineer with **5+ years** of experience architecting high-scale systems at **Careem** and **Airlift**. Experienced in building resilient backends. Early adopter of agentic engineering, leveraging AI to drive a **60%** increase in development velocity.

WORK EXPERIENCE

Software Engineer II — **Careem** — **Dec 2022–Present**
Careem Express Squad — Karachi, Pakistan — Hybrid

- Supported seamless logistics for **200+ B2B API partners** by maintaining high-throughput Java Spring Boot APIs.
- **Achieved zero production incidents** for Careem Express services by leading service maturity initiatives including Kubernetes Readiness, API Optimization, E2E Service Tracing and Acceptance Testing, ensuring 99.9% uptime.
- **Onboarded 10+ high-valued merchants** by developing a Live Captain Tracking system using Redis and Java ScheduledThreadPoolExecutor to notify live package location and ETA updates.
- **Enhanced engineering brand visibility** by leading the full-stack development of the Careem Blog.
- **Saved USD 1M** in annual revenue by implementing Dynamic Delivery Radius to optimize captain supply.
- **Reduced MTTR for P0 complaints** by serving as the primary on-call engineer. Authored a blog on on-call tips.
- Accelerated system design and implementation by **60%** with AI assisted development using Claude Code and Cursor. Utilized advanced features like Sub-agents, Skills, Memory, Plan Mode and multi-repo iAndexing.
- Migrated legacy Express (Careem B2B logistic offering) to new Logistics Platform as part of company-wide initiative.
- Mentored fresh engineers in the **Careem NextGen Program**. Delivered sessions on Redis and Swagger Codegen.

Tools and Technologies: Java, Spring Boot, Dynatrace, Docker, Kubernetes, Kafka, AWS, Claude, MySQL, Redis

Associate Software Engineer — **Airlift Technologies** — **Jun 2021–May 2022**
Supply Chain Squad — Karachi, Pakistan — Hybrid

- **Reduced server load by 10%** by optimizing the inventory update API. Published a blog on API optimization.
- **Enhanced customer satisfaction** by architecting an ETA calculation engine that analyzed historical data to derive realistic real-time order delivery estimates.
- **Enhanced inventory data integrity** by implementing a progressive retry mechanism for failed SQS events.
- Mentored fresh engineers under the **LIFT Grad Program**. Led their technical and functional onboarding.

Tools and Technologies: PostgreSQL, EBS, RDS, SQS, CloudWatch, TypeScript, NestJS, TypeORM, Redis, Redlock, Jest

EDUCATION

BS, Computer Science — **University of Karachi** — **Jan 2018-Dec 2021**
CGPA: 3.47 / 4.0 — Pakistan

- Developed “Let’s Ride”, a **console game** in C# implementing Object-Oriented Programming principles ↗
- Developed “Barbelator”, a real-time **barber shop simulation** program with Python and Google Colab ↗

Tools and Technologies: Python, JavaScript, C#, Assembly Language, Arduino, MySQL, XML, Google Colab

SKILLS

- Languages: Java, JavaScript, Python, HTML
- Technologies: Spring Boot, Docker, Kubernetes, PostgreSQL, Kafka, Dynatrace, Redis, S3, Actions, Git
- Engineering: Software Design Patterns, Clean Architecture, Microservice Architecture, CI/CD, SOLID
- Other: Technical writing, Dev-testing, Agile SD, Mentorship, Presentation & Public Speaking
